Subject: Images for disabled button in "Classic" style

It looks like images for disabled controls in "classic" theming style are calculated in strange manner. Just look at the same buttons in XP and classic themes:

You may try it yourself in WinXP, switching to classic theme and back. If my help is needed here, I'll try to dig into the code and make patch.

Looks fine to me:

Test case?

Please try this image for button.
It looks like some transparency issues.

Yes, it is a transparency issue. This is the filter being used for DisabledImage with XP classic:

RGBA sEtchFilter::operator()(const RGBA **mx)
{
 RGBA t;

```
 RGBA s = mx[1][1];
 if(s.a == 255 && s.r + s.g + s.b < 400) {
  t.r = t.g = t.b = 128;
  t.a = 255;
  return t;
 }
 s = mx[0][0];
 if(s.a == 255 && s.r + s.g + s.b < 400) {
  t.r = t.g = t.b = t.a = 255;
  return t;
 }
 Zero(t);
 return t;
}ImageOp.cpp
```
The alpha limit is there because you don't want to etch invisible pixels, it would look wierd.

IMO a good compromise would be this version that checks for alpha > 128:
```
RGBA sEtchFilter::operator()(const RGBA **mx)
{
 RGBA t;
 RGBA s = mx[1][1];
 if(s.a & 0x80 && s.r + s.g + s.b < 400) {
  t.r = t.g = t.b = 128;
  t.a = s.a;
  return t;
 }
 s = mx[0][0];
 if(s.a & 0x80 && s.r + s.g + s.b < 400) {
  t.r = t.g = t.b = 255;
  t.a = s.a;
  return t;
 }
 Zero(t);
 return t;
}
```

Tested your patch with some semi-transparent images.
All of them look good enough, also (s.a & 0x80) is a quick enough comparison.
Finally I agree with your proposal. Can you please publish it on SVN? Or else we should ask Mirek.

P.S. Why don't you use the same "transparency" method for classic theme disabled image?

Well, maybe we should. Back in days of Classic glory, this is how disabled icons looked like.

(BTW, I have just switched Win7 to classic and invoked WordPad to find out how MS manages disabled icons today. And guess what - they simply ignore the issue, WordPad still has fancy blue Aero buttons...

Of course. There is no need to make app uglier if it may look great)) I vote for switching XP-style disabling for images for classic theme. I also believe that it will not lead to any incompatibility even on Win98.
