It looks like
EditString::SetData and EditString::SetText operate to different values while working with SetData/GetData is a common way of operating internal control value for all other controls. I believe EditString::SetData should set control's text.

Subject: Re: Why EditString::SetData doesn't set text value of control?

It does, indirectly. (If not, provide an example please).

As for SetData and SetText differences, they are trivial with EditString, but important for e.g. EditInt...

Thanks for quick reply.
It is strange, simplified version works properly. It looks like bug was somewhare else. Sorry for bothering, Mirek. Please delete this topic.
