Hello all

Now the packages can have files or Topic folders.

By my mistake I have put few times a folder instead of a file and trying to delete it all the folder has been deleted

The code in TheIde is in UppWspc.cpp:

```
void WorkspaceWork::DelFile()
{
 if(!filelist.IsCursor() || filelist[fileindex[filelist.GetCursor()]].isdir) return;
 String file = GetActiveFilePath();
 if(IsFolder(file)) {
  if(!PromptYesNo("Remove the topic group and discard ALL topics?")) return;
  RemoveFile();
  DeleteFolderDeep(file);
 }
 else {
  if(!PromptYesNo("Remove the file from package and discard it ?")) return;
  RemoveFile();
  ::DeleteFile(file);
 }
}
```

I recognize it has been my fault but could it be possible to soften the Delete instead of using a DeleteFolderDeep()?, like:

- Checking that, if it is a folder, it has to have .tpp extension
- Copying the folder to Recycle Bin

Now the packages can have files or Topic folders.

By my mistake I have put few times a folder instead of a file and trying to delete it all the folder

has been deleted

BTW, how have you achieved to put a folder to package? Well, perhaps by editing the .upp, or deleting file and putting a folder with the same name...?

The only folder possible there by theide is AFAIK topic group...

Sorry Mirek

This post is so old that I do not remember the reasons.
