Hello all

Using DropTime I have a problem: both selecting an hour with the mouse and entering a single key launch WhenAction().

Is there a way to launch different events from accepting an hour or date, and clicking a key?.

The problem is that in my program changing a DropTime hour launches a process that lasts some seconds to complete. As entering keys launches WhenAction, the program and control gets blocked. This way I cannot link left mouse clicking with a program action.

The CtrlLib source is this. When Action is marked with this <<<---:

EditField.cpp

```
bool EditField::Key(dword key, int rep)
{
...
switch(key) {
...
default:
if(key >= ' ' && key < 65536 || key == K_SHIFT_SPACE) {
if(!RemoveSelection()) SaveUndo();
while(rep--)
Insert(key == K_SHIFT_SPACE ? ' ' : key);
Action(); <<<---
return true;
}
```

DateTimeCtrl.cpp

```
void Calendar::LeftDown(Point p, dword keyflags)
{
...
if(PopUpCtrl::IsPopUp())
{
sel = tm;
Deactivate();
WhenAction(); <<<---
}
```

Hello

Could anybody check this?
