Subject: PNG import bug
Posted by Mindtraveller on Tue, 18 May 2010 05:07:51 GMT

When importing PNG from file created by i.e. Photoshop, initially it is displayed correctly in the TheIDE image editor. But an attempt to embed this icon as app icon / tray icon displays it incorrectly: opaque pixels are displayed ok, while there's problem semi-transparent ones. This effect is also displayed when you just imported non-opaque image and click "Alpha" tool button. I placed original and spoiled images together to demonstrate:

I assume it is somehow connected with premultiplied format U++ uses by default.

::up::
bug is still there. Or am I doing something wrong and it's not a bug?
