Subject: Using QTF the easiest way (specially for Newbies)

Hello all

Sometimes we need to show rich text but it is not easy to code QTF by hand.

Just the simplest trick is to insert in a Topic++ group a new topic with the text, pictures, tables, ... arranged as you like. To get it you only need this line:

String qtf = GetTopic("topic://MyPackage/MyTopicPP_Group/MyQtfMessage$en-us"); // Change en-us with the used language

If you need to insert variables, you can set fields in the topic like [MyField] and after that do a:

qtf = Replace(qtf, DeQtf("[MyField]"), "My value");

This string is QTF so you can insert it in a Exclamation() a RichTextView or set into a Report.
