Subject: A problem of released versions compiled by gcc 4.3

The problem is that it can't be inputted Asia characters in the IDE. Applications produced by it can't be either.

Installing deb packages of the Ultimate++ in Ubuntu 9.04, I tried version 2070, 2361 , 2457. All have this problem.
So I build the IDE by myself, but the same with gcc 4.3.

At last I tried gcc 4.4, then it works.
Hope this helps someone.
