hi,

i'd like to give my Application an icon.

and i'd like to set that icon from within the code of the app, not using layouteditor or image/draw.

(the icon should change according to the state of the app and the icon gets renderd by my own functions)

so, how would i go about doing this?

thanks in advance,

abductee

You can use ImageDraw to draw image and Icon to show a new icon.

aqq2.lay:

```
LAYOUT(aqq2Layout, 200, 100)
ITEM(Button, Changelcon, SetLabel(t_("Icon")).LeftPosZ(52, 104).TopPosZ(44, 36))
END_LAYOUT
```

aqq2.h:

```
#ifndef _aqq2_aqq2_h
#define _aqq2_aqq2_h

#include <CtrlLib/CtrlLib.h>

using namespace Upp;
```

```
#define LAYOUTFILE <aqq2/aqq2.lay>
#include <CtrlCore/lay.h>
```

```
class aqq2 : public Withaqq2Layout<TopWindow> {
    void SetIcon();
public:
```

```
typedef aqq2 CLASSNAME;
aqq2();
};
```

main.cpp:

```
-----  
#include "aqq2.h"  
  
void aqq2::SetIcon()  
{  
    ImageDraw iw(16, 16);  
    iw.DrawRect(4,4,8,8,Color(Random(),Random(), Random()));  
    Icon(iw);  
}  
  
aqq2::aqq2()  
{  
    CtrlLayout(*this, "Window title");  
    Changelcon.WhenPush = THISBACK(SetIcon);  
}  
  
GUI_APP_MAIN  
{  
    aqq2().Run();  
}
```
