There is a SlaveProcess class in Web package. I think this functionality is not connected to Web, and should rather be where the Thread functionality is: in the Core package.

I more or less agree (as does Tom who recuctantly put it to the Web), however the trouble is that SlaveProcess derivate uses Socket which still is in the Web...

Mirek

To move both or a separate package?

You mean the RemoteSlaveProcess? That could stay in Web. I think it is normal for a non-Core class to derive from a Core class. Still the LocalSlaveProcess should be usable withouth the Web

package.

Well, I have that on ToDo for quite some time.

There definitely will be a huge codequake soon: T* packages will be removed from uppsrc (while move some worthy packages to Core/CtrlLib), Socket and *SlaveProcess will be moved to Core, PCRE package added etc...
