hi people, here comes a port of the current ColumnList to use other Ctrl's as content. this comes in handy when showing a lot of stuff, beeing able to reorganize it in good old ColumnList manned (flexible columns etc).

if anyone has the idea on how to make it have a common ColumnList code, please let me know..i remember ArrayCtrl is able to do that as well, to place even other Ctrl's inside the fields..

to see what changes have been done just rename the CtrlColumnList* files into ColumnList* files, and paste them into your uppsrc svn folder..

This behavior seems interesting.

Is it possible to include it in U++?

Yes, but I do not really like this particular implementation. (OK, ok, I know that now I have to provide mine...

no problem if anyone has the ideas / time to extend the current ColumnList with ArrayCtrl typical SetCtrl behaviour, that would be grat. i neither like the implementation, is a huge chunk of same code.. so better extend..

it was just to provide the idea, sometimes its not bad to have means to display a "meterbridge" or sth, that can resize automatically.
