Subject: Failed compiling theide 2467
Posted by ccf_h on Sun, 18 Jul 2010 23:07:48 GMT

Hi,

First: I'm not very experienced with this kind of stuff. So sorry, if it's obvious.

When I tried to build upp 2467 on my Linux box (g++ (GCC) 4.5.0 20100610 (prerelease)) I got
the following error:

Maybe a library is missing. But which one could it be?

Thanks for any help

Chris

Chris
Hi Chris,

It is a bug, caused by changes between libpng1.2 and 1.4 (PNG_iTXt_SUPPORTED macro is
now defined by default). I already reported this some time ago, but it went unnoticed.

Quick is commenting out the lines 430-432 in pngupp.cpp. It actually doesn't do anything and it is
safe to remove them.

Just out of curiosity, what linux distribution do you use? The major distributions still use libpng1.2
so this was not a major problem yet (I guess it might be one of the reasons why it is not fixed

yet...).

Best regards,
Honza

EDIT: Corrected link.

Honza, thank you very much! That worked.

Best

Chris

PS: I'm using Arch Linux.
