[View Forum Message](#) <> [Reply to Message](#)

Hello all

Is it planned in short term to mark the slider on its side with gradations like a thermometer scale?

If no, do you have any aesthetic ideas about how to do it?

Did you include it in the same Slider ctrl or you would do a new LengthMarkings class.

Subject: Re: Slider with thermometer like scale

[View Forum Message](#) <> [Reply to Message](#)

Hi, I have made a lot of improvements to the slider ctrl, including the ability to have a variable number of labels on the side.

Also, multiple thumbs on the same slider, and ctrls that are tied to the slider for output (ie a label ctrl that is updated automatically with the slider value).

I have been planning to submit this for incorporation into Upp, but I haven't had time to do much testing on it yet. Also, I haven't figured out how to add the Upp documentation yet...

I am using it in my own project, it seems to be working fine so far.

Anthony

I'm relatively new to UPP and will like to learn how to do this. Do you think you could share the relevant parts of how you did this scale?

Thank you in advance for any assistance you may provide
Jerson

[View Forum Message](#) <> [Reply to Message](#)

Here are my files for your reference. replace the ones in the ctrllib folder.

If you make any additions, let me know, as possibly we can include them as well.

I still plan to submit this for inclusion to the core asap...

Hello avpavp

Thank you for your improvements .

Some questions and comments:

- With SetTextLabels(int n) we can set the number of labels. How it is possible to paint the length markings or gradations?.
- Now the thumb goes under the labels. It seems to be more natural that the thumb is over the labels

I changed it so the thumbs are on top and added the gradations

```
SetGradations( int n );
```

You may need to size the slider in the layout manager to make the text etc fit best.

Anthony

Hello avpavp

Thank you very much for your fast response!

I would like to comment you some additional details :

- Now it is not possible to use `GetData()` because it is ambiguous. If you use `GetData()` the compiler does not know which of both to use:

```
virtual Value GetData(int nIndex = 0) const;
```

```
virtual Value GetData() const;
```

- Gradations are there, but they are not very visible. Would it be possible to increase its length and/or width?

- Screenshot above has these lines:

```
slider.SetTextLabels(5);  
slider.SetGradations(3);
```

It seems more natural to have the same number of gradations and labels.

Thank you again .

Hi,

I disagree a bit with API. What about having...

```
SetTickNum(int n); // SetTickCount
```

```
TickHaveLabel(bool b = true); // TickHaveNum , TickHaveText, HaveTickText, etc.
```

or something similar.

[View Forum Message](#) <> [Reply to Message](#)

Thanks for your feedback.

I'll add some customization to the gradients over the next day or two. Probably I will add some ability for major and minor ticks (different sizes).

I think the ticks and labels should be independent. Commonly (I think) you might want more ticks than labels.

Anything else I should consider or other ideas while I'm working on this?

Thanks,
Anthony

Have the labels determined by a Convert instance (or StdConvert by default). It'll be simpler but more flexible interface.

The Paint code could use a little improvement too. The labels are too close to the 'track' IMO and the tick could also extend slightly further upwards.

Here's my latest SliderCtrl.

I changed the way most of the labels and ticks were handled. Now things are based on Major and Minor ticks.

Major ticks have text labels. If you had a slider going from say, 0 - 200, you might set MajorTicks to 25, which would put larger ticks and text labels at 0, 25, 50, 75 ... 200.

Then you might set MinorTicks to 5, which would put minor ticks (smaller, no text) at 5, 10, 15, 20, 30, 35, ...

Also, you can set the tick sizes for Major and minor, 0 to 100 % of the size of the ctrl from the slider line to the edge.

Finally, you can set the tick location to above/below the line (left and right too).

I'd like to submit this for inclusion in the core once all the kinks are worked out. I gather I should generate the topic++ files or something? I looked around as much as I could, and couldn't really figure out how to do this. If Ultimate++ wants tpp or t++ or topic++ files I humbly suggest you make it a little better known how to create such files...

Thanks,
Anthony

[View Forum Message](#) <> [Reply to Message](#)

Hi Anthony

This looks very good. Couple of things that you might like to look into

1. There is a skew between the ticks and the thumb position. Like if the slider.Range is 100, the thumb almost always is left aligned to the tick when on the left of the median and right aligned as you go to the right of the median.

2. I could not get the slider.SetTickPosition to work. Keeps throwing up an error. Maybe I am doing something wrong due to inexperience in UPP

This is the relevant code cut from the sliderprogress package modified to use the new slider control

```
App() {
  Add(slider.BottomPosZ(5, 50).HSizePos(10, 10));
  Add(progress.VSizePos(10, 50).HCenterPos(50));
  Add(text.LeftPos(5, 200).TopPos(5, 40));
  slider <=<= THISBACK(Slider);
  slider.Range(100);
  slider <=<= 5;
  slider.SetMajorTicks(10);
  slider.SetMinorTicks(1);
  slider.SetMinorTicksSize(40);
  slider.SetMajorTicksSize(50);
  //slider.SetTickPosition(BOTTOM);
  Slider();
  Sizeable().Zoomable();
}
```

Would it be possible to autosize the Major and Minor ticks as a % of the slider size? A USC file to help set the slider in layout will be great help.

Thank you very much for your help with this.

Jerson

[View Forum Message](#) <> [Reply to Message](#)

I've spent quite some time looking at the alignment issue. I think there were a lot of issues with the drawing placement in the original SliderCtrl code, but no one could notice because there were no ticks or numbers. Anyway, I have fixed this up significantly, and cleaned up more of the SliderCtrl code in general.

You need to use:

```
slider.SetTickPosition( SliderCtrl::BOTTOM );
```

AutoSize would be nice.

Can you point me to some information on USC files? What do I need to do?

Anthony

Hi Anthony

Thank you for your updates. I'll check it out tomorrow, its almost midnight here and I'm too excited to bother with sleep. See my thread on the serial port.

I'm a newer newbie than you. Anyway, pick any control you like and look at the usc code in its package. I think it is also documented in the Help file.

I was able to do some quick mods to make my own meter class out of the Controls4U meter, slider and textbox. What I did, was to pick the USC code of the meter and modify it in my own MyMeter.USC file.

If you have any issues, let me know, I'll try to help. This forum is really great and I've learned a lot since my first post.

I've been silently working on adding to the work done by Anthony. I have not been able to do much, but, this is my contribution.

It is now a Slider with fill and has the vertical slider having its min on the bottom of the screen - like a vertical progress bar.

I'd like to have a class member to change the fill color eventually.

[View Forum Message](#) <> [Reply to Message](#)

I have made a better fill slider and slide switch which I have attached here. However, I have hit on obstacles in tying the USC code to my class. I wonder if there is any more documentation on how USC handles things. For instance, I found the enum_property keyword that makes an enumeration of property values. I'd like to use that to define the behaviour of my Fillslider and slidesw

Right now, I have done something like that in the USC code, but it fails if I change from the default value of CONTROL to INDICATOR

These are the 2 new slider controls. Comments / peer review appreciated

Hello Jerson

Please include a demo to test the controls and the .upp file with all of them.

I will try it today.

Subject: Re: Slider with thermometer like scale
Posted by [jerson](#) on Mon, 23 Aug 2010 08:52:41 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi Koldo

I have done as you suggested. There are some places where I need to improve -

- 1 - how to set CONTROL or INDICATOR from USC code.
- 2 - in SlideSw, I am unable to set the value on the slidesw indicator when clicking on the slidesw control away from the thumb. If I click and move the thumb the indicator updates correctly.
- 3 - how to set the vector of Names from either USC or code. Right now, I am doing it right inside the control which is not desirable.

The controls in the file are JFSlider, SlideSw, JFStaticText and MyMeter. The last one of course is specific to my requirement, but, I let it remain in the group. Later I can plan to gather all the USC code into 1 file. Is there any more details on ESC script than what is in the documentation; it seems quite lacking in detail. Things like enum_property, >Ctrl, Frame frame @1; do not make sense at all and do not seem to appear in the docs.

Thanks for your help

Hello Jerson

Here I enclose you the modified code. Check the differences with original. Some advices:

- I would include all slider classes in one. Both are almost the same, but some of the problems in .usc came from the names where very similar, but not right.
- You created Callback WhenSlideFinish but in main program you do <=< THISBACK(), so you

assigned the callback function to WhenAction, so nothing happened when thumb was moved.

Hi Koldo

Thanks for your immense help. Because of your active help I am almost swimming in UPP) I am now hooked to UPP.

I can now navigate the files effortlessly even though I stumble occasionally. Like I mentioned in my previous post, I plan to consolidate all the USC code for my controls into 1 grand file.

Can you enlighten me on Point 3 of my previous post. What I want to do is do a vector.clear operation and populate the vector either from the Main.cpp or from USC code (better option) so that I can visualize it correctly in the designer.

Any more rough drafts of the ESC documentation wherein more details can be obtained? I feel the ESC documentation is incomplete or maybe I am not looking correctly.

I am now so excited, I might contribute some more controls as I progress in UPP.

Best regards

[View Forum Message](#) <> [Reply to Message](#)

Hello Jerson

You are working very well.

About this: Quote:What I want to do is do a vector.clear operation and populate the vector either from the Main.cpp or from USC code (better option) so that I can visualize it correctly in the designer.I do not know how to do it in .usc the easy way.

The less easy way could be to do a function like SetLabels("0;Begin;25;Medium;50;Top"). This works and you will visualize the result in layout designer.

Quote:I feel the ESC documentation is incomplete or maybe I am not looking correctly.You are right.

Quote:I might contribute some more controls as I progress in UPP.This is great from you . Follow doing it this way and when your controls are stable and enough tested we can upload it for all to enjoy them.

Subject: Re: Slider with thermometer like scale
Posted by [jerson](#) on Wed, 29 Sep 2010 04:40:44 GMT
[View Forum Message](#) <> [Reply to Message](#)

This is my contribution.

In this package you will find

- the slider control and indicator
- slide switch control and indicator
- a Text label which can have its own background color

- mymeter which is just some embellishment of meter
and JFControlsDemo to check it all together

It is a little fancier and may not be generally suited for all, but, for my instrumentation needs, it is just fine. The tpp may be out of sync as I strung it up in a hurry.

Regards

[View Forum Message](#) <> [Reply to Message](#)

Hello Avpavp

I see. Could you include this feature in any way in the layout editor (.usc)? . Also the lower side of the slider (without marks) remains empty. Perhaps it is a better behavior that the slider would fill

its Rect. The only thing is that this way the slider line would not be centered. I mean (now and proposed):

Anyway sorry, it looks very well!

Last two petitions :

- Now the labels are printed using `AsString()`. Could it be possible to set a user defined formatting function?

Imagine this case. The slider uses seconds and there are a major tick every minute. I would prefer to put "1" instead of "60" and so on:

- In addition, when it is clicked outside the thumb, it is called to `Inc()` or `Dec()`. Would it be possible instead, to move the thumb to the position that has been clicked?. This means the user wants to go to that position (imagine your are using VLC)

- Click outside the thumb, there is a `fn Jump()`, call `Jump(true)` to get the behaviour you are requesting.

- user defined formatting `fn`, this sounds like a great idea. So it would be a virtual `fn` I guess? Or is there a better way?

- I don't know much about `.usc` files, but I will try, can you point me to some information?

- Your idea to better use the space is a good one. I will look into this as well.

Quote:- Click outside the thumb, there is a fn Jump(), call Jump(true) to get the behavior you are requesting.
Great!

Quote:- user defined formatting fn, this sounds like a great idea. So it would be a virtual fn I guess? Or is there a better way?
I prefer a Callback, because:
- If it is used a virtual function
-- You need to create a derived new class
--- So in the layout designer you get an empty box instead of a nice widget

To see an example, go to Scatter package, cbModifFormatX.

For example:

```
graph.LabelFormat = THISBACK(MyFormatFunction);  
...  
void MyClass::MyFormatFunction(String &s, int val) {  
    int min  = int(val/60);  
    int secs = val - 60*min;  
    s = Format("%02d:%02d", min, sec);  
}
```

Quote:- I don't know much about .usc files, but I will try, can you point me to some information?

- Your idea to better use the space is a good one. I will look into this as well.
I would remove before the slider spacing. After that I would go to .usc, as usc will copy original C++ code as much as possible.

Hello avpavp and Mirek

I have uploaded to Bazaar/SliderCtrlX the SliderCtrl improved version included by avpavp plus a label formatting function:

```
Callback2<String&, int> LabelFormat;
```

For example, if SliderCtrl contains time in seconds, but you want to visualize hour:min:sec format, you would do this:

In the constructor:

```
slider.LabelFormat = THISBACK(LabelFormatting);
```

And after that:

```
void LabelFormatting(String &str, int val) {  
    str = SecondsToString(val, false);  
}
```

And you would get something like this:

Thank you a lot, jerson ! I like also your slider too, and didn't plan to use it mainly because of the lack of .usc file ! This reason is no more available now

However, I should prefer to use an "official" control from bazaar. I'll try to make a .usc file for Koldo's slider starting from yours... I opened a new topic on how to make .usc files. I would appreciate if somebody can help me getting started with that

Hi,

Obviously, you have developped your sliders under Windows, jerson ! There are several problems with uppercase / lowercase under Linux ! Here is a version working under Linux, hoping it still works under Windows (should, but not tested...)

What is nidaqmx.lib mentionned in .upp file ? This was making a link error, so I suppressed it. Seems to not be missing...

I checked it on WinXP and it still works.

NiDaqMx is the driver for National Instruments Data Acquisition MAX package. It was being used to test modbus functions and stayed in the package. Definitely not needed for these functions.

Regards

Hi,

jerson wrote on Fri, 22 April 2011 08:30I checked it on WinXP and it still works.

Nice ! I was quite sure, as I changed only upper/lowercases, but we can be sure only when tested !

I'll go on studying all that. I already compared Koldo's and avpavp's one : they are the same except Koldo's LabelFormatting ability lastly added. I'll now compare with your version and try to make something with .usc file...

Thanks for your help

Hi,

If you talk about avpavp, I'm afraid that he doesn't come here anymore... His last visit was on November 10, 2010, almost 6 month.

I think that :

- As avpavp doesn't reply anymore,
- As he put here his code,
- As you put it in bazaar,
- As you made Controls4U, where this enhanced slider could take place,

you should try a last time to contact avpavp by email and consider yourself as main maintener of the package

For me, I'm busy on other things for now, but I'll try to mix the bazaar version and jerson's one ASAP (I hope to have time in 1 or 2 weeks). I think that there is some good ideas in jerson's version that could easily be included in SliderCtrlX.

Perfect. Prepare the new version and while it waits to be included in main U++, it can be in Controls4U (with the necessary references to the authors).

[View Forum Message](#) <> [Reply to Message](#)

Hi,

Here is a new version of SliderCtrlX, with many enhancements, most of them inspired by jeson. See the source for details.

Any comments and ideas are welcome

There is still things that I should like to adjust better, mainly alignments and positions, and also the .usc file to have a better look of the control... I'll try to see that when I have some free time.

There is a bug that I cannot solve : the FillColor is not working with the layout designer.

Hello Jibe

Nice work. The program crashes if I compile it with 'optimal' settings. It only works in 'debug' mode. I have not been able to identify the cause yet. SSE2 extensions on/off makes no difference to the crashing. I'll let you know if I find anything.

Regards

[View Forum Message](#) <> [Reply to Message](#)

Hi,

Yes, it's weird... This works well :

JBControlsTest.h :

```
#ifndef _JBControlsTest_JBControlsTest_h
#define _JBControlsTest_JBControlsTest_h
```

```
#include <CtrlLib/CtrlLib.h>
#include <Controls4U/Controls4U.h>
#include <JBControls/SliderCtrlX.h>
```

```
using namespace Upp;
```

```
class JBControlsTest : public TopWindow {
public:
    typedef JBControlsTest CLASSNAME;
    JBControlsTest();
```

```
    SliderCtrlX slider;
};
```

```
#endif
```

JBControlsTest.cpp :

```
#include "JBControlsTest.h"
```

```
JBControlsTest::JBControlsTest()
```

```
{
    Add(slider.FillColor(Color(255, 85, 0)).SetThickness(3).SetThumbType(4).LeftPosZ(63,
330).TopPosZ(220, 52));
    slider.Jump(true);
}
```

```
}
```

```
GUI_APP_MAIN
```

```
{  
    JBControlsTest().Run();  
}
```

Just move "Jump", and you get an "Invalid memory access" at run time...

```
#include "JBControlsTest.h"
```

```
JBControlsTest::JBControlsTest()
```

```
{  
    Add(slider.FillColor(Color(255, 85,  
0)).SetThickness(3).SetThumbType(4).Jump(true).LeftPosZ(63, 330).TopPosZ(220, 52));  
}
```

```
GUI_APP_MAIN
```

```
{  
    JBControlsTest().Run();  
}
```

Part of SliderCtrlX.h :

```
...  
private:  
...  
    bool    m_bJump; // Jumps directly to mouse pos if click on the scale  
...  
public:  
...  
    SliderCtrlX& Jump(bool v = false)    { m_bJump = v; }  
...
```

Part of SliderCtrlX.cpp :

```
...  
SliderCtrlX::SliderCtrlX()  
: m_nMin(0)  
, m_nMax(100)  
, m_bInverted(false)  
, m_nStep(1)  
, m_bRound_step(false)  
, m_bJump(false)  
, m_bUseCustomThumbs( 0 )  
, m_nMajorTicks( 10 )  
, m_nMinorTicks( 2 )  
, m_nMajorTickSize( 30 )  
, m_nMinorTickSize( 20 )
```

```

, m_nTickPosition( TOP )
, m_nThickness( 2 )
, m_nSliderType( 0 )
, m_nThumbNumber( 1 )
{
...
}
...
void SliderCtrlX::LeftDown(Point pos, dword keyflags)
{
...
else if( m_bJump )
{
    m_vValues[0] = ClientToSlider(p);
    WhenSlideFinish();
    UpdateActionRefresh();
}
...
}
...

```

... I don't understand...

Subject: Re: Slider with thermometer like scale
 Posted by [koldo](#) on Fri, 13 May 2011 20:32:19 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hello Jibe and Jerson

First jibe version works well in debug and optimal just doing these changes:

In SliderCtrlX.h

```
SliderCtrlX& Jump(bool v = false) { m_bJump = v; return *this; } // Added return *this;
```

In SliderCtrlX.cpp, void SliderCtrlX::Paint(Draw& w) method (this line was hard to understand for me):

```

w.DrawImage(max( SliderToClient(m_vValues[i]) - ( ( m_bUseCustomThumbs ?
m_vThumbImgs[i].GetSize().cx : m_ThumbImg.GetSize().cx ) >> 1 ), 0),
    m_nThickness + ((size.cy - ( m_bUseCustomThumbs ? m_vThumbImgs[i].GetSize().cy :
(m_ThumbImg.GetSize().cy ))) >> 1), // Added parenthesis
    HasCapture() || HasFocus() ? (m_bUseCustomThumbs ? m_vThumbImgsFocus[i] :
m_ThumbImg) : (m_bUseCustomThumbs ? m_vThumbImgs[i] : m_ThumbImg));

```

PD: What is the problem with FillColor ?

Subject: Re: Slider with thermometer like scale
Posted by [koldo](#) on Fri, 13 May 2011 21:10:21 GMT
[View Forum Message](#) <> [Reply to Message](#)

Oh, there is something else...

It works with MSC debug and optimal and with MinGW debug, but with MinGW optimal it hangs in SliderCtrlX& SliderCtrlX::SetThumbType(int n) here:

```
m_ThumbImg = SliderThumbsImg::Get(m_nThumbType);
```

Subject: Re: Slider with thermometer like scale

[View Forum Message](#) <> [Reply to Message](#)

Hi, koldo,

koldo wrote on Fri, 13 May 2011 22:32 First jibe version works well in debug and optimal just doing these changes:

In SliderCtrlX.h

```
SliderCtrlX& Jump(bool v = false) { m_bJump = v; return *this; } // Added return *this;  
So, it was that simple !
```

I already had a missing "return *this", but it was making an error at run time, so I didn't think about that...

Why the compiler (I'm using GCC, under Linux) does not complains, at least with a warning ? Normally, it should detect that a return statement is needed...

koldo wrote on Fri, 13 May 2011 22:32 this line was hard to understand for me
Yes, it's true ! I kept it from the original version of SliderCtrlX that you put in bazaar, but hesitate to use some intermediate variables... Probably, it's to do to have a more readable code! What do you think ?

koldo wrote on Fri, 13 May 2011 22:32 What is the problem with FillColor ?
Just try to change it from the graphic layout designer : you'll get an "invalid memory access" error.

koldo wrote on Fri, 13 May 2011 22:32 it hangs in SliderCtrlX& SliderCtrlX::SetThumbType(int n)
What could be the reason ? I cannot experiment this, as I'm working under Linux...

Subject: Re: Slider with thermometer like scale
Posted by [koldo](#) on Sat, 14 May 2011 19:32:01 GMT

Hello

About the return *this;, it has been reported that gcc options in TheIDE could check more warnings like this . It is very simple to add it to TheIDE.

About that line, it came from original code from avpavp. Avpavp, if you are there, do you agree to split this line ?

About the FillColor, I change it in layout designer without problems...

About the hanging in MinGW, do you mean that in Linux it works now well? It is very strange.

Hello, koldo,

koldo wrote on Sat, 14 May 2011 21:32Hello

About the return *this;, it has been reported that gcc options in TheIDE could check more warnings like this . It is very simple to add it to TheIDE

And it has never been done ? This kind of warning is very important... I lost a lot of time with that, as I was not looking there, being sure that I should have get a warning...

koldo wrote on Sat, 14 May 2011 21:32About the FillColor, I change it in layout designer without problems...

That's weird... With 3412 under Ubuntu 10.04, I can't get it working... Well, I'll verify the return statements

koldo wrote on Sat, 14 May 2011 21:32About the hanging in MinGW, do you mean that in Linux it works now well? It is very strange.

Mmm... What I mean is that I didn't try with Mingw, as I work under Linux and cannot test windows exes. Under Linux with Gcc, it's working well.

If I can, I'll try on a windows computer, or with wine...

Hi,

Here is a new version of SliderCtrlX, with :

- Koldo's and other minor corrections,
- Focused Thumb images
- split line drawing the thumb (as avpavp didn't say anything... who is silent consents)

I created also a new control, named StarIndicator, to have stars for votes. See code (and code header) for details.

BTW : I wanted to have a hand cursor when it goes on the thumb. How can I do that ?

[View Forum Message](#) <> [Reply to Message](#)

Hi,

koldo wrote on Thu, 26 May 2011 22:41Just do this change or similar to avoid MSVC complains
Done.

Koldo, if you want to put it in Controls4U, no problem for me. More : I think that it could be good to have all enhanced controls in one library. About other authors :

- I used indirectly avpavp's code, as I took your version of SliderCtrlX
- I took many ideas from jeson's version, but no code,
- No other authors for StarIndicator, but I picked some parts of code from ProgressIndicator in CtrlLib.

jibe wrote on Thu, 26 May 2011 19:06BTW : I wanted to have a hand cursor when it goes on the thumb. How can I do that ?

If somebody has an idea... I can't find a simple way to do that...

[View Forum Message](#) <> [Reply to Message](#)

Hi,

Yes, I know that... I'll add this in the 2do list in the header :

```

/*****
* SliderCtrlX
*
* Enhanced Slider Control / Slider indicator
*
* Autors : avpavp, jerson, jibe, koldo
* Last modified : May 28, 2011
*
* 2do : adjust DrawTicks() in every position
* Thumbs are not always at the right position at Min and Max values (we should have a half
* thumb).
* adjust default values when changing CONTROL/INDICATOR
* Known bugs : Invalid memory access when choosing FillColor with .lay designer (seems to be
* only with ubuntu. See http://www.ultimatepp.org/forum/index.php?t=msg&th=6022&start=0&
*****/
```

There is also a bad position of the scale (ticks), it was already in the 2do list. I never had time to see that : seems to be not so easy to find how to adjust all that... I'll try to take time for that, but if somebody has some idea...

Almost perfect

The thumb in the beginning touches the end of the control, but at the end there is a little gap

between it and the end of the control.

Anyway, if you want it can be included in Controls4U, changing a little bit the authors list of course .

Hi, koldo,

koldo wrote on Fri, 10 June 2011 10:11 See this:

It happens the same to the horizontal ones.

Excuse me, I'm not sure to understand what you mean... Is it about this ?

koldo wrote on Thu, 09 June 2011 12:44 The thumb in the beginning touches the end of the control, but at the end there is a little gap between it and the end of the control.

I know that there is this little gap, but don't know why and don't know how to avoid it in a clean way... I think that I could do so that there is a symetric gap, but not a clean way : this is the reason why I didn't do anything about it...

If you were showing me another problem, please explain as I don't see...

Here is a new version, with enhancements on StarIndicator :

- More readable text
- Possibility to show value/votes permanently
- Possibility to show or not the total (ie : 3.6/5 or only 3.6)
- Possibility to show the percent or the value/5 (ie : 2.5 or 50%)

Hello Jibe

Painter is the way in U++ to do antialiasing graphics.

It is compatible with Draw but it adds much more features.

There are many samples in PainterExamples package.

Anyway I can try to help you to translate the stars into Painter.

Subject: Re: Slider with thermometer like scale
Posted by [koldo](#) on Tue, 29 Nov 2011 08:07:42 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hello Jibe

I have tried new StarIndicator version and it works well for me.

It is rather easy to translate the Paint function to Painter. If you want I can do a simple version for you to extend it when you learn more.

One comment about comments . For example

```
StarIndicator& StarIndicator::SetVotes(int n)
/*****
 * Sets the number of votes and the associated color
 * virtual - public
 *****/
{
    m_nVotes=n;
    if (n<0) SetColor(LtCyan);
    else if (n < m_nVotesLow) SetColor(Color(255,128,128));
    else if (n < m_nVotesHigh) SetColor(Yellow);
    else SetColor(LtGreen);
    Refresh();
    return *this;
}
```

If I were you I would move all the comments like this to a .tpp help file. This way they will be

accessible to help system and they will appear in web .

Subject: Re: Slider with thermometer like scale
Posted by [jibe](#) on Tue, 29 Nov 2011 09:58:18 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hi, koldo,

Don't know what to do about that... I will first have to know what is painter exactly and how to use it (Some "getting starting doc would be usefull ! Is there some doc that you could advice to me ?).

For now, in the last version I sent yesterday, it seems not so bad. I'm using iml images. If Painter cannot use iml images, I'm afraid that it will be a lot of changes. Are we sure that the result will be really better ?

Another thing : I tried yesterday to compile your PainterSvgDemo, but I got an error (with 4205) in line 506 of ParseSvg.cpp. Seems not serious (conversion requested), but as I have not so much time for now, I didn't check why there is this error. I'm afraid that it hides another one...

EDIT : Pls see next post...

[View Forum Message](#) <> [Reply to Message](#)

Hi Koldo,

koldo wrote on Tue, 29 November 2011 17:02 Here Mirek left excellent Painter examples.
Yes, I saw that yesterday. It gives a good idea of what can be done with Painter, but to know how it works and how to use it, the only way is to study the code.

I didn't look at the code, because when you lack time it's not easy, sometimes very difficult, if you don't have any idea on what it is exactly. And if you know very few about the subject (I never coded anything about images and drawing), I'm afraid that the code will be veeeeeeeeery veeeeeeeeery long to study and understand !

So, I'm afraid that studying the code will not be very usefull for me, unless I spend a big amount of time, as I'm just supposing without being sure that Painter is a kind of vectorial drawing...

koldo wrote on Tue, 29 November 2011 17:02 A good thing is that with Painter we would not use star images and we could get nice visual effects.
Yes, no doubt about that ! I'm just afraid that it will be a big and long work when the result is already good in the last version ! More especialy when I have first to learn how to code drawings + what is painter exactly and how to use it...

As I said, I should be happy to learn about all that, but I have few time and the lack of doc is discouraging.

koldo wrote on Tue, 29 November 2011 17:02 About .tpp help file I can begin one for you for StarIndicator and you could complete it.

Thank you for your help ! I found those explanations and I think that I can do that. Just give me some time, and I'll send you a version with .tpp help. I prefer that you spend time to convert StarIndicator to Painter or document Painter

I'm just beginning to study that and did not find yet how to do to have translations. I think that I will find quickly, or if you can point some doc about that, I'll make also the translation in french.

If Honza can publish his explanations in the doc, it will be better seen and could be completed (ie for translations), so that we can find easily all we need to make the doc

I found how to have translated .tpp files. In fact, it's easy and intuitive in the special editor of Thelde.

=> I'll do en-us and fr-fr .tpp files for StarIndicator and SliderCtrlX ASAP.

Hello Jibe

If you want I can include Painter in StarIndicator with few and commented changes from original code for you to understand better.

When you learn more you can add nice effects to the stars like shades and reflections... if it makes sense .

Ok, it's kind for you

If you can, this will help me to learn how works Painter ! I don't think that reflexion and shade will be good in this control, but if you think that it's better to use Painter and can do it, why not ?

I began to make the .tpp file. Not so difficult ! I'm just surprised that I cannot change the text color with the editor, but I worked around this by copying/pasting from other files...

Hi, koldo,

Yes, I saw the tools in the toolbar, but when I click, nothing happens... (4205-lucid-i386-nogtk)

Here is the .tpp file for StarIndicator.

Pls let me know if it's Ok or if there are some changes to do. I'll make the SliderControlX tpp ASAP.

Hi,

Here is the doc for SliderCtrlX, and some minor corrections/adds to StarIndicator doc.

It could be good that somebody re-reads and corrects these docs : even if I did them carefully, I could have make some mistakes !

Hi Koldo,

I just discover that the link to SliderCtrlX is missing in your widget list,

Also, the doc seems not to be on the web (while StarIndicator do is there).

Could you correct this, please ?

Hello Jibe

It is now uploaded.

However remember that uppweb shows in internet all tpp pages that are linked. I mean, if anybody adds a new tpp help page and it is not linked by any other, it will not be shown in the web.

Yes. So, it was the reason why SliderCtrlX was not visible in the web... and why it is now that you add the link in your widget list.

By the way, you told me in your message #34574 :
koldo wrote on Wed, 30 November 2011 17:57Hello Jibe

If you want I can include Painter in StarIndicator with few and commented changes from original code for you to understand better.

When you learn more you can add nice effects to the stars like shades and reflections... if it makes sense .

It would be good if we can use painter, as the images are not so good. Just to make them better, or why not to add some shadow or 3D effect to make it more beautiful.

But there is no emergency : if and when you have some free time... I could probably do it myself, but I have no time and no other need for now to learn painter.

Hello Jibe

Painter is different but rather simple.

StaticRectangle and StaticEllipse (Controls4U.cpp) are very simple Painter samples.

Remember that Painter primitives use double instead of int to have subpixel accuracy.

Hi Koldo,

Ok, thank you. I'll look at all this when I have some time.
