Hi,

I have a project in C++ and want to migrate to ultimate++.

Some functions are into a dll and i don't know how to import them into my u++ project!

Thank you

I have a similar situation. I need to make calls to some APIs of a data acquisition card. Any ready examples to follow? I am a newbie to C++ and UPP, so if it is covered somewhere, I'd appreciate some pointers.

Thank you

DLI is what you need.

That's great, thank you,

I will try it and inform you about the result

Have a nice WE

Ratah

Hello

Here you have another C-like option:

[http://www.ultimatepp.org/src\\$Functions4U\\$Dll\\$en-us.html](http://www.ultimatepp.org/src$Functions4U$Dll$en-us.html)

Hi,

Thank you I will try that and inform you the success!!

A+

Hi,

I use the Function4U, it's OK!!!

Now my question is:

Instead of .dll i want to use Library of my compiler (a GCC on windows) such as libws2_32.a

How to do that?

Thank you

Hello Ratah

Good question

Perhaps the worst solution you will ever heard is, to do a .dll statically linked to your .a lib, and just loading it.

However it will work
