I am curious if anyone has an example on how to accomplish a file upload with HttpClient?

Thanks,

Jeremy

Here is a very rough example. This is all hard coded, so should only be used as a point to go ahead and make something more abstract. It does work.

```
String boundary = "BbX8c0";
HttpClient c("http://localhost/upload");
c.ContentType("multipart/form-data; boundary=" + boundary);

StringBuffer b;
b.Cat("--" + boundary + "\r\n");
b.Cat("Content-Disposition: form-data; name=\"Filename\"; filename=\"file.txt\"\r\n\r\n");
b.Cat(adif.ToString());
b.Cat("\r\n--" + boundary + "--\r\n");

String pd = (String) b;
c.Post(pd);
String result = c.Execute();
LOG(result);
```
