Hello,

I have little space in vertical direction, so if the tabs are on the left side would be OK. But it seems not supported by the standard Ctrl.

Is there something useful in Bazaar? I had a look at it but with too many "Tabs" around I was a bit confused and I do not know which is stable and supported. Any suggestion?

Thank you,
Luigi

Hi Luigi,

The TabBar from mrjt should be able to do that. At least according to the picture in this thread

Honza

The TabBar from mrjt should be able to do that. At least according to the picture in this thread

Honza

Thanks Honza,

I had a look at it.

In TabBarCtrlTest example I was not able to find a method to put the tabs on the left side.

In FileTabs example I was able to orient the tabs but I have not understood how to associate to each tab a specific layout.

Perhaps I am missing something easy to see.

Luigi

FileTabsExample::main.cpp:11

```
for (int i = 0; i < 4; i++)  
    bar[i].SetAlign((i+1) % 4);
```

TabBar.cpp:39

```
AlignedFrame& SetAlign(int align) { layout = align; FrameSet(); RefreshParentLayout(); return  
*this; }  
AlignedFrame& SetLeft() { return SetAlign(LEFT); }  
AlignedFrame& SetTop() { return SetAlign(TOP); }  
AlignedFrame& SetRight() { return SetAlign(RIGHT); }  
AlignedFrame& SetBottom() { return SetAlign(BOTTOM); }
```

for (int i = 0; i < 4; i++)
    bar[i].SetAlign((i+1) % 4);
```

TabBar.cpp:39

```
AlignedFrame& SetAlign(int align) { layout = align; FrameSet(); RefreshParentLayout(); return
*this; }
AlignedFrame& SetLeft() { return SetAlign(LEFT); }
AlignedFrame& SetTop() { return SetAlign(TOP); }
AlignedFrame& SetRight() { return SetAlign(RIGHT); }
AlignedFrame& SetBottom() { return SetAlign(BOTTOM); }
```

Sorry to bother again... but I do not catch how to use the AlignedFrame& to left set the bar in the TabBarCtrlTest... I am becoming older and older

Luigi

sorry, forgot to add one line in the post

```
//set a different align for all 4 TabBar's
for (int i = 0; i < 4; i++)
    bar[i].SetAlign((i+1) % 4);
//add only the first to main application window, the others on demand
AddFrame(bar[0]);
```

you add the TabBars as Frames to your main application Ctrl (or wherever you need them)
