Is there anybody out there trying to run upp on FreeBSD 4.x?  
Because a build error occurs on these systems using the port I submitted.

The error report can be found on:

<http://portsmon.freebsd.org/portoverview.py?category=devel&amp;portname=upp602>

It seems that there is stdint.h missing on these systems, but inttypes.h is available instead.  
Is that right?

Matthias

Is that right?

Matthias

Shouldn't this topic be in "Compiling ..." category or (Edit:) better "installation and running"?  
"Problems and discussion about installation and running under different OS..."?

"Problems and discussion about installation and running under different OS...?"

Yes, you are totally right. I think the "Compiling ..." category is the most appropriate. I am sorry about that.

No problem at all! It's easy to move.  
Edit: But I'm moving to "installation and running under different OS" then Mirek can decide...
