hi-

If I use the Add method to add a control, how do I get the Id of the individual tab I want to add the control to?

```
WithSLCMHCalLayout<TopWindow> t1;
```

```
CtrlLayout(t1);  
t1.SizePos();  
iTab.Add("Tab1").Slave(&t1);  
iTab.Add("Tab2").Slave(&t1);
```

```
Add(iCal.LeftPosZ(92, 180).TopPosZ(166, 156));
```

In the code above, iCal is a Calendar control. iTab is of type TabCtrl.

thanks for any assistance-
jim

Hello Jim

I do not understand you well. Where are you adding iCal?. If t1 is of type TopWindow, it is strange to add it to a TabCtrl.

However, this could serve to you:

```
WithSLCMHCalLayout<StaticRect> t1, t2;
```

```
iTab.Add(t1.SizePos(), t_("Tab 1"));  
iTab.Add(t2.SizePos(), t_("Tab 2"));
```

```
....
```

```
Item &myTab = iTab.GetItem(iTab.Find(t2));  
myTab.Disable(); // Now tab where t2 is located, is disabled
```

hi Koldo-

That is exactly the code snippet and explanation I was looking for. I know I didn't code it right. Now I will be able to use tab controls with more practice and studying hopefully. I need to hit the manual and really practice in my spare time after work.

Thanks very much for the tip,
jim
