Subject: New functions for Esc

Hello Mirek

fn DrawArc();

I would like some functions to be added to Esc:

fn atan(z);
fn abs(a);
fn double(n); // Returns n converted to double
fn DrawEllipse(); fn FillEllipse();

fn DrawCircle(); fn FillCircle();

Now I use some home made versions in Esc, but the drawing quality for filling functions is less than ideal .

Hello Iñaki,

(I am aware this request is old -a decade old :lol: - but I am putting this notice here for newbies and those who need it (as you did once), in case they would like to play with Esc)

There is now EscPainter in UppHub, which brings functionality of Upp::Painter to Upp::Esc.

Best regards, Oblivion
