
Subject: Docking - Saved Layout - Main window size?

I really like the configuration dialog of the docking suite however I wonder about the layouts not saving the main windows location and size. Most (if not all?) of the time when you have different layouts with tabs in different areas, different tabs "floating", etc... the main window size will be affected as well, no?

It seems that the main window size is not saved or restored with layouts. Is there a reason why not that I am not thinking of?

Thanks,

Jeremy

Perhaps you are right. I'll have to think carefully about changing it though, there is a high potential of causing problems in application that already use it.

Maybe it can be implemented as an option that defaults to off.

Jeremy
