Hello Mirek

HexString(const byte \*s, int count, int sep, int sepchr) function in file Util.cpp, line 545, does not support count == 0.

In that case, it tries to allocate:

StringBuffer b(2 \* count + (count - 1) / sep)

, that is

StringBuffer b(-1)

, so it gives an exception.

Just beginning the function with a

if (count <= 0)

return "";

would solve it.
