There is none for TreeCtrl at the moment. You may be able to simulate it either by using specific Display, or maybe by integrating ArrayCtrl with TreeCtrl.

...or maybe by integrating ArrayCtrl with TreeCtrl.

In fact, that's what I need. Any hints, how?

Nothing special, just put them side by side (or maybe make TreeCtrl a left frame) and handle WhenOpen/WhenClose (perhaps the easiest way is to simply rebuild arrayctrl content each time).
