Hi,

I have been thinking of making another commercial IDE for other languages (or for C++ but with more functionality) out of Ultimate++ Ide.

The ide would have a different name..

(As Eclipse have been used similarly)

My question is is that ok?

Is it enough if I just place a copy of BSD license in the root directory of the new application.

And a text in about Box

(Based on Ultimate++ IDE) or I do not know what I should put there.

What do you think?

We are pleased to hear that you are making a derivative out of u++

Please make a credit.

Sure, it is OK. In the end, both parties will benefit anyway...
