Hi,

How can I get the name of the file I have just, for instance, saved? AFAIK the value returned by the FileSel Ctrl is the full path of the file but not the name of the file. Also, the Get method does the same. Please correct me if I am mistaken.

Cheers,

Javier

See String GetFileDirectory(const char *path); // with DIR_SEP at the end
String GetFileFolder(const char *path); // without DIR_SEP at the end, if not Win32 root
String GetFileTitle(const char *path);
String GetFileExt(const char *path);
String GetFileName(const char *path);
and other function from Path.h.
