P.S. :- I am just 14 years old, so please don't expect very much effort. I don't know how to use the SVN...

What should I do next?(total votes: 7)

Create a 3d fps with a good AI with Irrlicht 1/(14%)
Develop a U++ libcurl auto updater 0/(0%)
Go back to gaming 0/(0%)
Work against GNU and GPL, then support BSD 0/(0%)
Develop a really simple collective libcurl interface 1/(14%)
Do nothing 0/(0%)
Eat potatoes 0/(0%)
Request permissive licensing for GPL'd 0/(0%)
Go to M$ 1/(14%)
Develop my OWN OS with BSD/Haiku kernel with U++ Built-in 0/(0%)
Campaign for U++ widgets   0/(0%)
Trolling everywhere to use U++   2/(29%)
Research on Robotics 0/(0%)
Others... (Please say) 2/(29%)

Forks U++ into a new project, using the license that you want and all other things that will make you happy.
You will find a lot of people which shares your ideas and which will want to contribute.

If not: option 1 also is a good one

Try http://projecteuler.net/ with "powaah" of U++ console Core (to better understand it). So you can help other newbies later in forum . Also that page *is lot of fun*, if you are really into coding.

Don't blame MS, they do their work honestly... Buying windows is cheaper than hiring YOU to write windows from scratch. Sad thing about GNU:
1.It is selfish
2.It use GPL and LGPL
3.It blames others for its own fault.

So I try to stick on MS, and BSD, Apache, Xiph, etc...

How about all the lawsuits M$ has lost, settled or still pending.
XP is OK but Vista was/is a joke with all the cute stuff added and the problems involved. The M$
port of C++ to C# is something many programmers try to avoid.

Ubuntu with Wine = $0.00
Faster, safer and less errors.
If you have a need to change some of the core OS code you can.
Try that in M$.

Sad thing about GNU:
1.It is selfish - - And M$ is not?
2.It use GPL and LGPL - - No open license, just $$$ and more $.
3.It blames others for its own fault. - - How is this different for M$?

M$ good for casual users

Apple good for selling gizmos($$$) but way behind the curve in software.

Linux/Unix hard for new users.

It depends on a persons need. You don't use a screwdriver when a hammer is necessary.

You should do all of the above except number7.
