I've noticed when updating to a more recent U++ and using HomeBudget that the behavior when adding new rows has changed. Focusing seems weird and wrong to me. Also "Accept" and "Reject" buttons don't seem to always be aware of adding items like they used to be.

Don't know if these changes are intentional or not, but previous behavior was better. And why doesn't the default value for a category get applied when creating a new expanse and selecting the category for it?

And yes, I have been using HomeBudget for a little bit of home budgeting. Expenses are killing me .

I tried to simplify grid code but my it was not my intention to change grid's behavior Sorry about that. Could you post a screenshot from home budget or write step by step how to get this wired focusing behavior and what you mean by that?

I thought no one is using this. My wife used it for few months (but it was too cumbersome for her to do it all the time) and it was great to see where the money are spent. And I was too lazy to keep on doing this.

Best way to see it is to have a new db and add a new category:

Only after pressing enter can you see the confirm and cancel buttons enable:

Thank you! (how could I miss that ). It's fixed now and it will be available in the svn tonight.
