If I have `Button button;` in my code and I put the cursor on `Button`, is there any quick way to go to the help topic for the `Button` widget.

Similarly, with `button.VCenterPos(40);`

if I use `Alt J` with the cursor on `VCenterPos`, I get taken to the definition of `VCenterPos` and then if I hold the mouse over the little green square in the margin I can see a description of what the function does. Is there any other (or better) way to see the description of the function.

Graeme
