Hi!

Very often I have to use awful casting to be able to do:

```
Value v(1);
```

```
if((int)v == 1)
{
...
}
```

Could `operator==(String &)` and `operator==(int)` (two common cases) be added to Value class?

This code seems to be much more 'eye-candy'..

```
if(v == 1)
```

PS: Of course `operator!=` should be extended too..

This code seems to be much more 'eye-candy'..

```
if(v == 1)
```

PS: Of course `operator!=` should be extended too..

Hm, maybe we should try to resolve the ambiguity first? (It is quite a lot of operators to add
