My OS is WindowsXP and locale is Chinese (simplified).

I try to compile my Upp program with VC 2005..The compiler shows errors about the file ctrlLib.t.

The errors are almost like this "error C2001: newline in constant".

If I change locale to English (United States). It works very well.

how to solve the problem if i still use Chinese (simplified) locale. It is really inconvenient for changing locale to English .

thanks..

What version of U++ do you have?

Are there any missing double quotes in the lines that give the errors? How many errors are there?

Can you post (some of) the line numbers and the exact content of those lines that give the errors.

Graeme

This is a problem with VC compiler (well, sort of).

Anyway, recent U++ version should have workaround implemented.

So if you are using not so recent version, upgrade. (The most actual ones are on google-mirror).

If you have latest, please get back here and report again...

I am afraid i can't upgrade the recent version. Because we have changed a lot of Upp for our projects. So I must try to find why the VC compiler can't work currently and eager to know the reason..

Bad bad mistake... I know that with sources as open as U++ has, it is tempting, but long term the maintenance costs will hurt you... it has already started to hurt here
