Hi, Everyone

First of all, sorry for my bad english. Im indonesian and english is not my native language.

I am new here. Im usually develop application using VS but I think they are not good enough. So, I search for something better and support multi platform.

Then, I found UPP. I've try UPP for a moment and I found UPP good and much better besides its GUI.

Now, I put my hope on UPP and I wish UPP can be used for something lets say mission critical. Or is it already have ?

Last question, U++ got oracle conector, but does it have IBM DB2 connector ? I think it wouldn't be so hard to deploy an IBM DB2 connector since U++ already had postgre connector. Some peoples says postgre is IBM DB2 wannabe

I connected to DB2 through odbc. You can also try built-in oledb connector. Of course it's better to use native solutions but for now it's all you can use.

thx for your quick reply

Im gonna try later using oledb. But I want to play with UPP now, exploring UPP features to makes me more familiar to UPP

best regards,

dayro
