Hi there,

break and a paragraph break, it exists?

If not, how I could archive this feature, have a line break in a paragraph without break a paragraph?

thanks in advanced.

[[l60; In paragraph&New line, same paragraph&][New paragraph]]
There is a distinction... '[]' means paragraph and '&' means "new line". New line may be in paragraph or outside of it. If you don't add a new line at the end or start of a paragraph it share same line as previous paragraph. QTF is a bit different that other "text formats", it doesn't include new line at the end of a paragraph, here paragraph is an style-able entity, so you may have paragraphs in paragraphs.

Sorry, but this explanation is IMO incorrect.

'&' is always the paragraph break. There are no line breaks in QTF (it is document format).

'[' and ']' are formatting brackets. Formatting can be active over the span of several paragraphs (even tables and table cells).

Mirek

  Sorry for misinformation, but that's what i've thought for long time about QTF. Someone should add that to documentation to make it clear.

I do not know, I would say that of all things, documentation of QTF is quite complete and clear about this issue:

http://www.ultimatepp.org/srcdoc$RichText$QTF$en-us.html
