Hi,

I had an account to commit change on svn. Does my account is still valid? Where and how should I commit changes on upp at present?

I ask this question because I'm unable to commit like I could before.

I was using a line like this one:

```
svn commit --username username --password password -m "my message" path/file
```

```
(svn server svn://90.xxx.x.x...)
```

Well, what path you tried to commit and what was the error message?

Hi

I need to access "upp.spec" but this file is in svn/trunk/uppbox/Scripts/

No error message at all. No message too when I do "svn diff" but if I do "svn revert" it get back to the old version.

Is not it just possible that it is committed?

Ok. Fixed.

I removed the wall svn directory and checked out a new fresh one.

After this, "svn commit" worked again. I still don't know what happened.

The new upp.spec add a work around for fedora 14 rpm build and also add xterm to requires.

Thank.
