hi guys, i've been struggeling with editing LogPos from a control, but thats fairly hard..
so i've come up with the idea of a 'edit dialog control' to be able to live edit LogPos of a Ctrl.

maybe someone could spare some seconds to view it and let me know what could be done better..

i've actually extracted the behvaior from ide/LayDes, so the functions are almost all known..

my goal is, as mentioned in anoter post, to offer dynamic edit possibilities for properties of arbitrary controls. based on a properties list and providing some default editor controls for well known types like Option for bool, EditInt for int, ColorPusher for Color, etc.. well, for LogPos, which is vital part of a ctrl, no 'editor' was found, so this control came up.

EDIT: check also this thread
