Could RichEdit print using default selected printer, without showing printer dialog?
I just see the Print() on it...

Thank you

JoseB

Yes. You will have to supply your own print button...

Then, follow "normal" print, except do not invoke Execute for PrinterJob. Something like:

```
void PrintDefault(const RichText& text, const Rect& page, int currentpage, const char *name)
{
 PrinterJob pj(name);
 pj.CurrentPage(currentpage);
 pj.PageCount(text.GetHeight(page).page + 1);
 pj.Landscape(page.GetWidth() > page.GetHeight());
 Print(pj, text, page, pj.GetPages());
}
```
