Here are a few C/C++ applications made with Upp and the NLNwww java app they interact with.
<http://www.nlneilson.com/nlnwww.html>

All work in Windows.

The .exe apps work with Wine in Linux except GPSx2.exe only works in Windows.

All the bugs found or reported have been fixed.

They are menu driven so most are intuitive to use.

The code is done but need to make a Help file.

Thanks for the help on this forum and the excellent work done creating Upp.

Neil
