Hi,

I want to prevent editing certain rows of ArrayCtrl depending on the contained values.

Is there a way to do this

NB: StartEdit() method is not virtual so I can't derive the class

I want to prevent editing certain rows of ArrayCtrl depending on the contained values.

Is there a way to do this

NB: StartEdit() method is not virtual so I can't derive the class

This is quite specific request

If the ArrayCtrl is not supposed to hold MANY rows, I would probably used "the other" method of editing it, with embedded widgets for each row, and simply not assigned any for rows I do not want to edit.

```
void ArrayCtrl::SetCtrl(int i, int col, Ctrl& ctrl, bool value = true);
```

If this does not solve your problem, I am not strictly opposed to adding required option to ArrayCtrl

Mirek

Another option is to use GridCtrl where you can enable/disable editing for particular row/column or cell.

```
grid.GetRow(10).Editable(false);
```

Hi Mirek and undogs,

Quote:Another option is to use GridCtrl where you can enable/disable editing for particular row/column or cell.

Actually I'm using SqlArray so changing to GridCtrl is not plug&play so I'll stick with SqlArray for now.

Quote:If the ArrayCtrl is not supposed to hold MANY rows, I would probably used "the other" method of editing it, with embedded widgets for each row, and simply not assigned any for rows I do not want to edit.

```
void ArrayCtrl::SetCtrl(int i, int col, Ctrl& ctrl, bool value = true);
```

I will try this method, I didn't see it. I thought edit ctrls were only set to rows.

NB: I don't have many rows, and never will (max 100)

Thanks !
