Hi,
Is there a way to add includes to custom build step ?
I have:
cnvtpipl.exe "$(DIR)\$(TITLE).r" "$(DIR)\$(TITLE).pipl" -
which "almost" works, but cnvtpipl.exe can't find header files
included in .r file.
All the required directories are specified in build method, unfortunately cnvtpipl.exe doesn't "see" them.
Any help would be greatly appreciated!
Wiktor

Are you trying to  run this
cnvtpipl.exe "$(DIR)\$(TITLE).r" "$(DIR)\$(TITLE).pipl"  from inside  U++ TheIDE macros or how?

I believe that what you need is (surprisingly

$(INCLUDE)

which should contain include paths...

Project/Custom build steps

I Just wanted to draw someone's attention yesterday late night. Btw, I haven't been using theide for 2 months or so...

Thanks for the help!
Telling true it's a bit more complicated than I thought
A command line is (sample):

cl /IPath /IPath /EP /DWIN32=1 /Tc"$(InputPath)" > "$(IntDir)\$(InputName).rr" cnvtpipl.exe "$(IntDir)\$(InputName).rr" "$(IntDir)\$(InputName).pipl"

so .r file is precompiled with cl, result from stdout is saved to temp .rr file then .rr is processed with cnvtpipl.exe

The step is required to build scriptable plugin for Photoshop.

Is there a way to just call/exec the "line" ?

Wiktor
