page - [http://www.ultimatepp.org/app\\$ide\\$GettingStarted\\$en-us.html](http://www.ultimatepp.org/appideGettingStarted$en-us.html)

title - Getting started with TheIDE

section - 3.1

content -

3.1 First, if this is your main package (if you don't know what a main package is, just assume it IS :) select "Main package configuration" from the "Workspace" menu.

note - there is no "Workspace" menu, "Main package configuration" is in "Project" menu

fix - 3.1 First, if this is your main package (if you don't know what a main package is, just assume it IS :) select "Main package configuration" from the "Project" menu.

title - Some explaining about the TheIDE:

content -

What is stored where ?

When first using the TheIDE, it can be confusing to see that settings like static/shared building, execute-, include- and linker- paths can be set in multiple places (for instance, in Workspace->Package Organizer, in Setup->Build methods and by clicking on the current build method in the mainscreen (top of the screen ie. "GCC Debug").

Workspace->Package organizer:

fix - two references to Workspace-> should be Project-> both

p.d. - Please, delete this post after

Hi and welcome to U++ forum

Thanks for pointing this issue out, the page for new users should not have such issues. I'll update it to reflect current state. Also some of the pictures are very outdated, so that will be fixed as well.

Best regards,
Honza

Updated and committed. The changes should appear on the website tomorrow morning.

If you find more outdated information, please let me know. I am aware that the documentation is not exactly in a great shape, but I'll do my best to keep at least the parts aimed at beginners up-to-date.

Honza
