Subject: Debugging ESC

Hi,

I'm looking into embedding ESC in my own applications to provide a simple scripting engine. I would like to provide the user some basic debugging facilities, like 'step through' and 'step into'. I guess some callback mechanism should be included for this, which gets invoked just before every DoStatement() call.

Are there already handles provided for this or should I modify the ESC-code myself to get this possibility [in which case it may some take some time, as I've to write the app-core first ]

Best regards,

Martin
