There are too short lines after synchronization. t files.

T_("Dictionaries")

T_("SQL console")

T_("Help")

T_("Open window for add new customer")

T_("Refresh")

T_("Local Settings")

Perhaps this is due to feature information storage in the .t-file.

Since this fragment actually in the file is as follows:

T_("Dictionaries")

ruRU("\320\241\320\277\321\200\320\260\320\262\320\276\321\207\320\275\320\270"
"\320\272\320\270")

T_("SQL console")
ruRU("\320\232\320\276\320\275\321\201\320\276\320\273\321\214 SQL")

T_("Help")
ruRU("\320\237\320\276\320\274\320\276\321\211\321\214")

```
T_("Open window for add new customer")
ruRU("\320\236\321\202\320\272\321\200\321\213\321\202\321\214 \320\276\320\272"
    "\320\275\320\276 \320\264\320\273\321\217 \320\264\320\276\320\261\320\260"
    "\320\262\320\273\320\265\320\275\320\270\321\217 \320\275\320\276\320\262"
    "\320\276\320\263\320\276 \320\272\320\273\320\270\320\265\320\275\321\202"
    "\320\260")

T_("Refresh")
ruRU("\320\236\320\261\320\275\320\276\320\262\320\270\321\202\321\214")

T_("Local Settings")
ruRU("\320\233\320\276\320\272\320\260\320\273\321\214\320\275\320\260\321\217"
    " \320\232\320\276\320\275\321\204\320\270\320\263\321\203\321\200\320\260"
    "\321\206\320\270\321\217")
```

Question! How to cancel this mode. And how to make an acceptable translation editing.

Actually, I have noticed this problem some time ago - something is repeatedly damaging .t files, I mean converts them back from 'safe' representation.

Well, if this is 'synchronize' operation, that would narrow it down. Going to investigate...

Well, it is weird, but I am still unable to reproduce the moment when it goes bad...

Yes. It's happens after synchronize operation.

I'll try test it after update svn. Maybe probleme is gone.
