Subject: Bazaar page table changes
Posted by koldo on Mon, 07 Feb 2011 07:55:04 GMT

Hello all

Now Bazaar page with the list of packages updates automatically fills release date and package size.

If you add a new package in the list just leave both fields empty. Uppweb will check svn to get the last release date and the package files to get the size.

Be careful and put the package name exactly as the real package folder name (including letter case), to let uppweb to do the scan.

Hello all

An additional detail. In index page has been added the web update time.
