I use my own package DotSplitter with nice dotted line

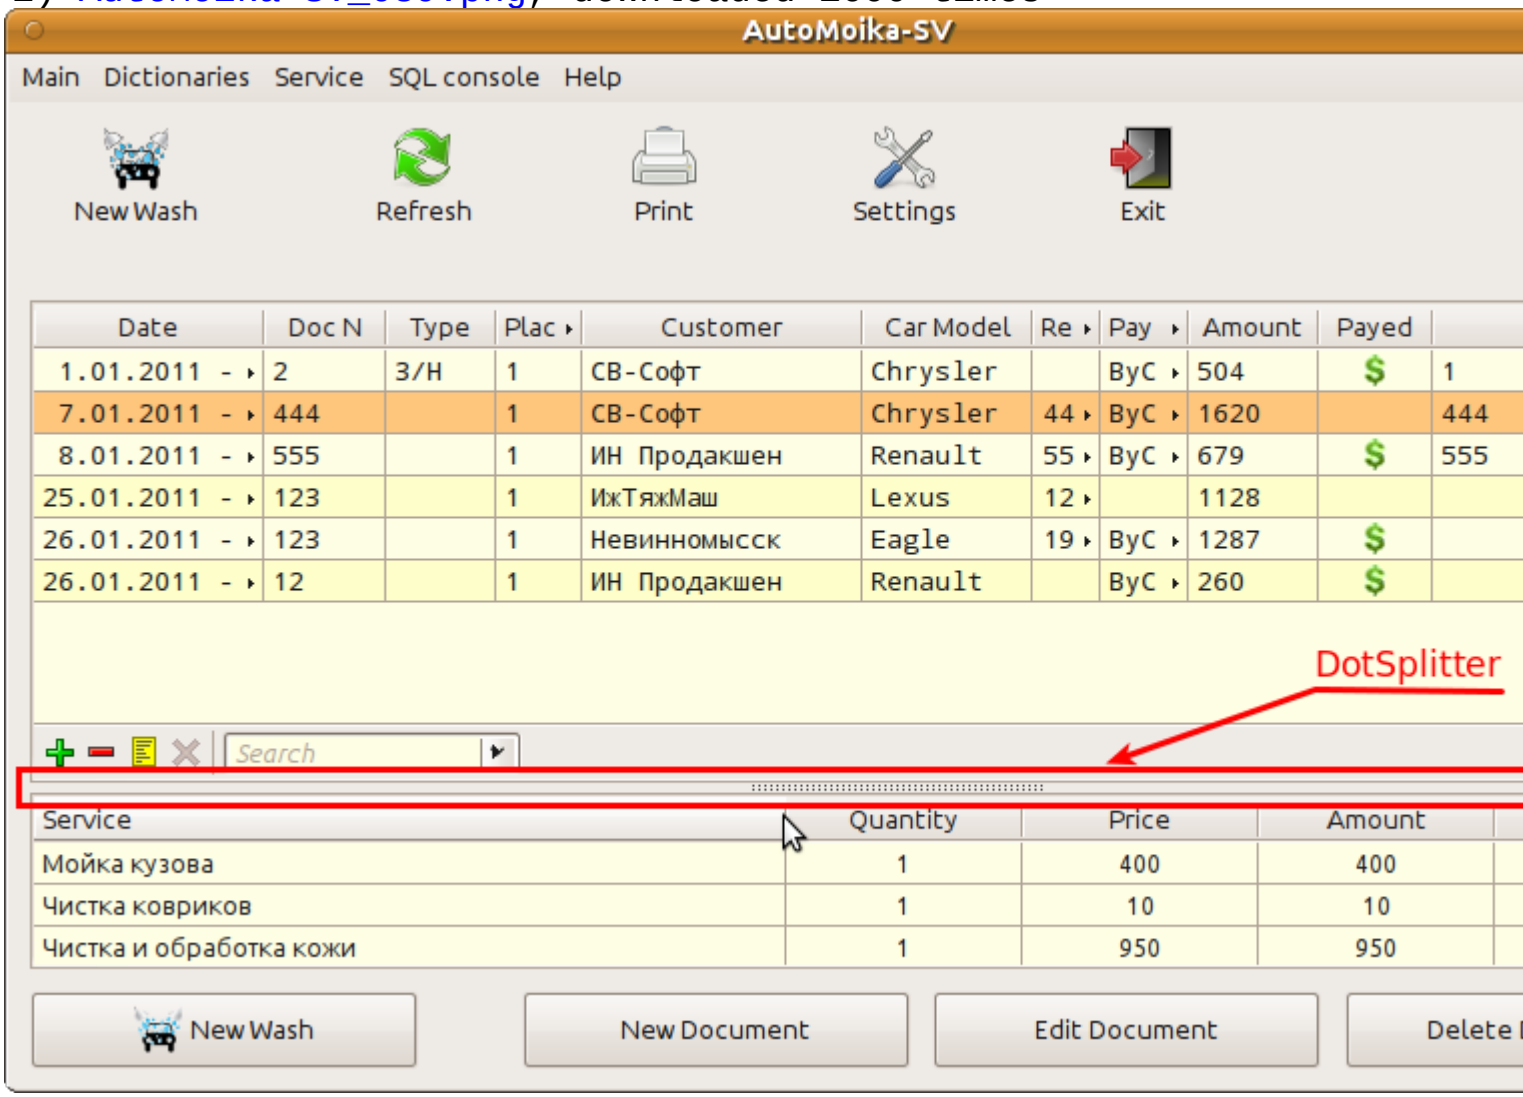

like mozilla splitter.

Package in attachment. To use it copy to your MaApps folder and change in your project type of control from Splitter to DotSplitter.

MayBe extend Styles of splitter. To have ability to add same dotted style?

Very appealing.

But it seems to reproduce an artefact (line of dots) at the bottom of the example (see bootom of button "hi c!" in the attached example), does it not?

Thanks,

Javier

Hi,

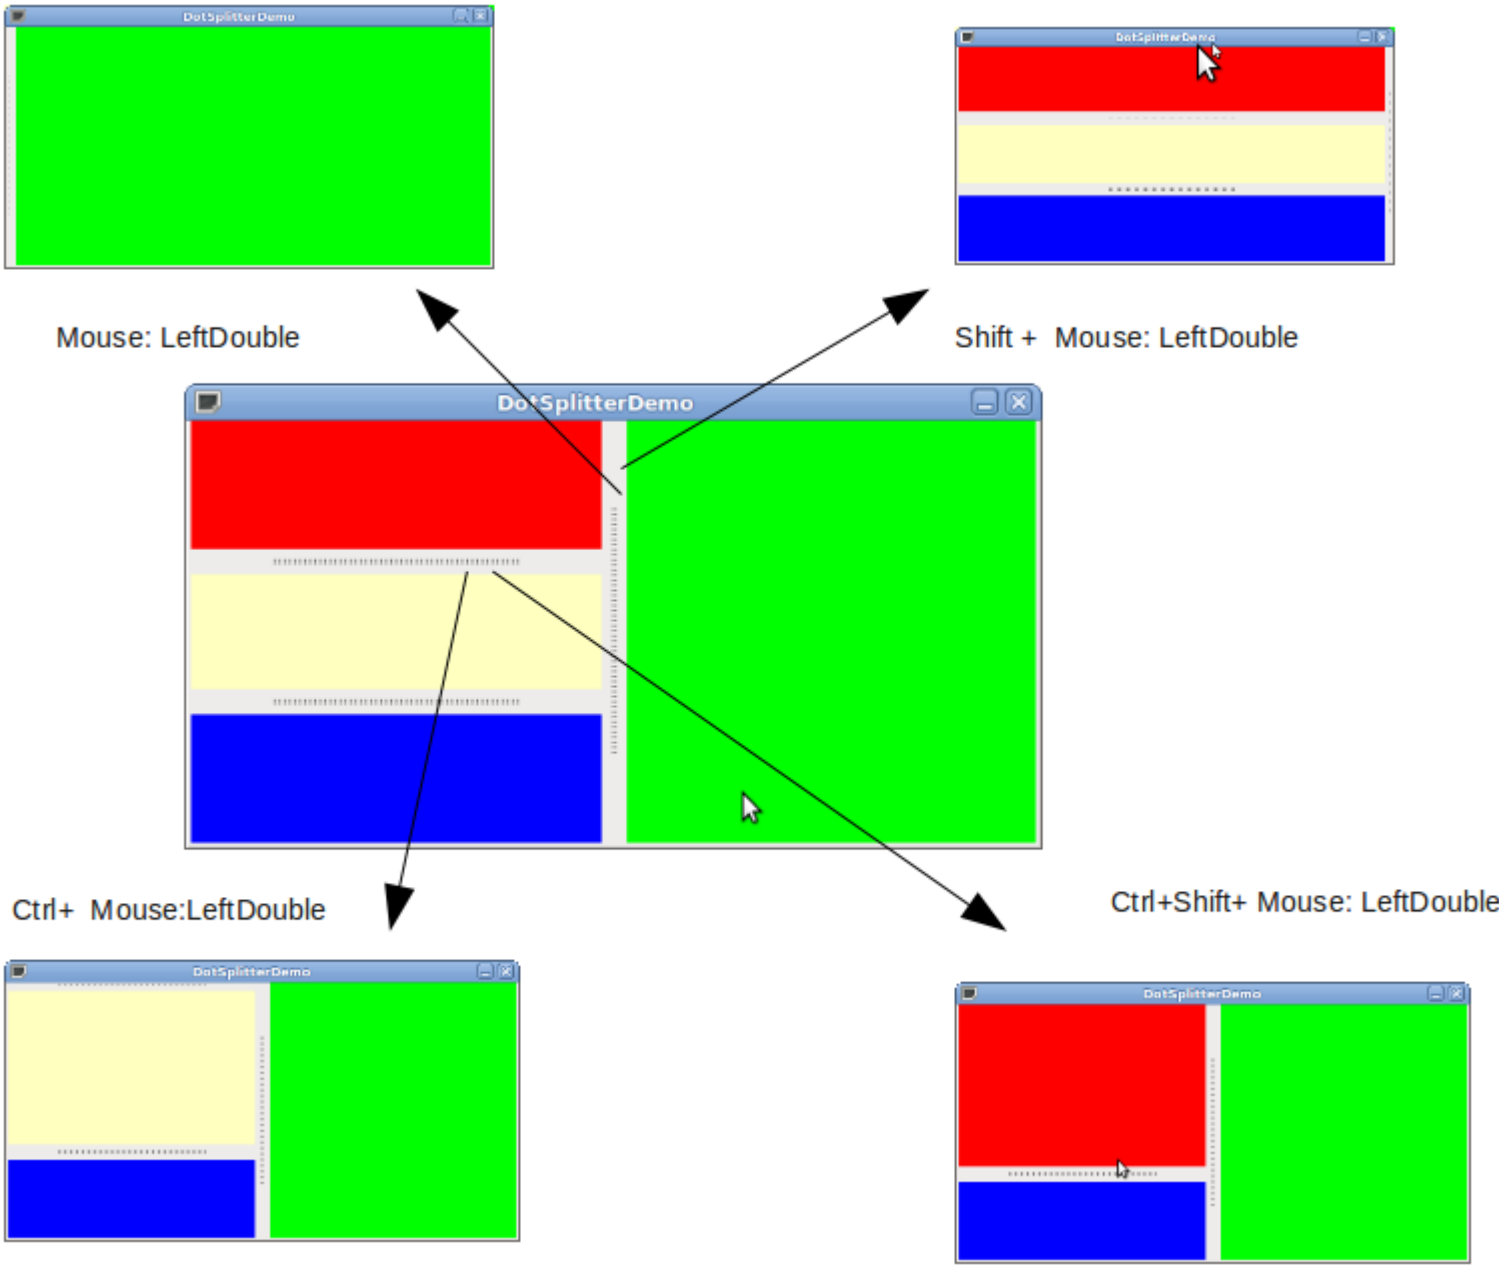

here, i have made small changes on DotSplitter

use Mouse -> LeftDouble to expand a pane
Shift-Key -> change direction of expand
Ctrl-Key -> change the modus of expand

is this user-friendly?

It Will be nice, when DotSpitter will be apart of Splitter class.

Maybe not this way... But very need to have dots (or alternative visual solution, shown movement ability) on splitter bar.
