A starting point to learn how to port a C++ framework to Android:

Quote:I had a dream that one day, I'll be able to deploy existing Qt software on any Android platform.

I had a dream that one day, all Qt applications will use system wide shared Qt libraries.

I had a dream that one day, all Qt applications once compiled and deployed to one android platform, will run on any other newer android platform and will last for years without any recompilation.

I had a dream that one day, I'll be able to create, manage, compile debug and deploy Qt apps using a first class citizen IDE.

Now, those dreams become reality.

This looks interesting:

Android SDK Info

Sample App
