Subject: How to use an existing OCX in my Upp project ? (ocx integration, ocx wrapper)

Hello,

I read you documentation about ActiveXcontrol. I saw that it's possible to create a new OCX from UPP.

The question I have now is, how to proceed when I have an existing OCX (alone) and I want to use commands from this OCX in my UPP code? I read on the net that it's possible to obtain the idl file from an OCX by using oleview.exe from Microsoft. So, right now, I have my idl. Once I have it, which steps do I have to follow to run the MIDL compiler and complete the wrap to obtain my .cpp and my .c files?

Am I on the right way?
