Hello all

I wanted to have a Ctrl like this:

I have begun deriving WithDropChoice. However if the Edit has the focus, the drop list is automatically removed. Is it possible to have drop list visible and edit with focus at the same time like in the picture?

This way handling WhenAction, the list would be changed showing only the values that match with user string.

This way handling WhenAction, the list would be changed showing only the values that match with user string.

I thing that a good hint will be IntelliSense in U++.

Try DropGrid.

This my Screenshot. I just typed "M".

Field - Manager is DropGrid.

Hello Sergey

Is it possible to edit text in DropGrid?
