I got this error:

/usr/include/gtk-2.0/gdk/gdkpixbuf.h:37:35: fatal error: gdk-pixbuf/gdk-pixbuf.h: No such file or directory

Solve (work, but not better):

sudo ln -s /usr/include/gdk-pixbuf-2.0/gdk-pixbuf /usr/include/gtk-2.0/gdk-pixbuf

---

Can I suggest a cleaner solution: add '/usr/include/gdk-bixuf-2.0' to the include paths in the build setup dialog from theIDE...

Hi trader.

The correct solution is to add the include path "/usr/include/gdk-pixbuf-2.0" to the build method setup. Just go to Setup > Build methods and add the path in the Include paths tab.

What version of theide have you installed? I think that this path was added to the standard settings quite a long time ago...

Best regards,
Honza

Hi Honza

I just ran into this error also with 3274

/usr/include/gdk-pixbuf-2.0 is not in the "INCLUDE directories"
but /usr/include/gdk-2.0 is there.

Neil

Oups, my mistake I forgot to add it into the postinst script that creates the settings when the
package is installed on ubuntu... It should be fixed in tomorrows nightly build. Users with existing
installations might need to copy /usr/share/upp/GCC.bm into /home/<user>/.upp/ (unless they
already fixed it manually of course). Newly installed apps should be ok.

You are doing a great job with the ppa.

Neil
