On the topwindow you can do sizeable and zoomable, and you can change the size and that.

But if I do a layout, how do you make it sizeable and zoomable like you can the topwindow?

I have tried adding that to all kinds of items, and get errors.

Can it be done, and how.

see:
TopWindow& TopWindow::Sizeable(bool b)
TopWindow& TopWindow::Zoomable(bool b = true)

Yes, you can have a resizeable layout. You need to click on the 'resize with springs' button on the layout editor while you design the layout. Or, if you already have designed the layout, select all controls on the layout and press the 'resize with springs' button.

That should make your layout resizeable, but, for me, it hasn't worked too well. It ends up with overlapped objects. You can try.
