For a pop\_up box like the Help->about  
PromptOK("[A5 uWord]&Using [\*^www://upp.sf.net^ Ultimate`+`+] technology.");

How do you add another line of text?

Maybe you can use the RTF editor provided in sample programs, eg., blue bar to create the text you intended to display and save the file somewhere. There rename the file to abc.txt (on windows) and view it as ASCII text, and copy the text to your program.

Sorry I don't know much about Upp RTF format yet. Here is the output of my experiment:

```
[ $$0,0#00000000000000000000000000000000:Default]
[{}
[s0; [5 uWord]&]
[s0; Using [*^www`:/upp`.sf`.net^ Ultimate`+`+] technology.&]
[s0; Which excels!]
```

Thanks Lance but I was looking for an easy and understandable way of doing it.

Usually "\n" will create a new line.  
I have no idea what the square brackets are for in this context.

```
void About()
{
    PromptOK("[A5 uWord]&Using [*^www://upp.sf.net^ Ultimate`+`+] technology.")& + "[2 Which excels!]");
}
```

Just tinkering found that & is for a new line.

Without the 2 or a space it throws an error.

What should have been 10 minutes with an example turned into a couple hours.

Neil

That you'll have to familiarize yourself with the QTF grammar:

Here

Or more specific:  
Basic QTF codes

\_ Hard-space - space that cannot be divided at the end of line.

& New paragraph.

-| Tabulator

@\$hex; Unicode character as hexadecimal number.

I am in more or less the same stage in learning U++ as are you. There are too much to learn and sometimes quick and relevant pointer is not readily available.

With U++ I am not more advanced.
