Hello,

I have a trouble with load 16bit tiff image and set color/contrast auto-level.

Is possible in U++?

Thank you in advance!

Hello Ion

Is it a 16 bits per color image?

What do you mean with set color/contrast auto-level?

Hi Ion,

Unfortunately, U++ doesn't support 16 bit tiffs at the moment, and even libtiff support is quite limited. Have a look at this thread about the same topic, there are some links to sites suggesting how to possibly overcome these limitations...

Best regards,
Honza

In Photoshop Exists possibility to change color/contrast level.

Thank you for quick response!

Best regards,

Honza

Thank you for hint.

I tried to open the tif image in U++. it opened OK, but on I tried to change contrast with the method:

Image Contrast(const Image& img, int amount)

but the contrast was not so good.

Any hint are welcome!

Thank you for quick response!

I have a trouble with load 16bit tiff image and set color/contrast auto-level.

There is no routine for that at the moment.

Should not be hard to do I think... but one would have to be sure about algorithm I guess.

Hello Ion

In summary you can open the image right and set it in an Image. This is very good .

About the algorithm I agree with Mirek. I have searched about Photoshop algorithm unsuccessfully, but it seems they change the contrast by spreading the color histogram by all the range. There is more than one way to do it.

Please send here a sample of an image before and after that effect and we can try to give you the function.

Thank you Koldo for help.

I will try to find a solution too!

I have attached a simple image in tif 16bits before and after autolevel.

Hello Ion

Here are the images and their histograms. You see the second one more extended along the color range.

If you can wait a couple of days I can prepare something.

Ah, your girlfriend is very pretty .

Koldo,

It is exact What I need.
Can you share with code?

P.S. This is not my girlfriend. I'm married and you can see more photos by address:

OK, Now I'm able to print the histogram!

before autolevel:

and after autolevel:

and the algorithm:

```
Vector<XY> hist_data;
for(int i=0;i<256;++i)
    hist_data << XY(i, 0);

const RGBA *s = ~img;
const RGBA *e = s + img.GetLength();
while(s < e) {
    v_curr_value = (s->r+s->g+s->b)/3;
    hist_data[v_curr_value].y++;
    if(hist_data[v_curr_value].y>v_max_y)
        v_max_y = hist_data[v_curr_value].y;
    s++;
}
```

The easy way remain how to compute the autolevel algorithm in base of histogram!

Hello Ion

In your case to pass from one histogram to the other is as easy as multiplying any pixel by a factor.

In a more complex scenario you should have to set a window of your histogram and determine which function to apply, like:

New color = F(Old color)

Remember to use function `int Grayscale(const Color& c)`. The conversion to gray is more adequate .

PD. The second histogram strange zeros seem to indicate that there is a problem in the conversion program.

I think this is what I look for:

http://en.wikipedia.org/wiki/Histogram_equalisation

I did a variant of autolevel, but I intend to modify by wikipedia specification.

```
Image ImageAutolevel(const Image& img){
    uint64 histogram[256];
    for(int i=0;i<256;++i)
        histogram[i]=0;

    const RGBA *start = img;
    const RGBA *s = start;
    const RGBA *e = s + img.GetLength();
    while(s < e){
        histogram[(s->r+s->g+s->b)/3]++;
        s++;
    }
    int v_lower = -1;
    int v_upper = -1;

    for(int i=0;i<256&&(v_lower===-1||v_upper===-1);++i){
        if(v_lower===-1&&histogram[i]!=0)
            v_lower = i;
        if(v_upper===-1&&histogram[255-i]!=0)
            v_upper = 255-i;
    }

    // return if not sense to autolevel
    //if(v_lower==v_upper===-1)

    if(v_lower===-1)
        v_lower = 0;

    if(v_upper===-1)
        v_upper = 255;

    s = start;
```

```
ImageBuffer w(img.GetSize());
Unmultiply(w);
RGBA *t = w;
```

```
while(s < e) {
    t->r = s->r*255/v_upper;
    t->g = s->g*255/v_upper;
    t->b = s->b*255/v_upper;
    t->a = s->a;
    t++;
    s++;
}
Premultiply(w);
w.SetHotSpots(img);
return w;
}
```

Hello Ion

Your code is right, although consider this fragment:

It is better to convert your original image from RGB to HSV, apply the algorithm to the Luminance component and convert the result to RGB.

In U++ we have the functions RGBtoHSV() and HSVtoRGB().

I finally get the wanted result! Was able to read true 16bit tiff image, set autolevel and after that converted in 8bit Image.

The result is like in Photoshop.

It seems that equalization and autolevel a 2 different algorithms.

If somebody want, I can share the code!

Koldo,

I have attached the package where I made testes.

This is not the final version. I did not made autolevel for color images.
I can prepare and attach the final version.

If you want to test this, do not forget to set tif version which I uploaded to:
<http://www.ultimatepp.org/forum/index.php?t=msg&th=6004&start=0&>
