ArrayCtrl - embedded controls clicks are not synchronized with array row cursor?

If you click e.g an option control on ArrayCtrl row - the array cursor doesn't move unlike the TreeCtrl's. Missing sync or need to add some extra settings? I think it should be the default behaviour?

Strange, I do not see it move in TreeCtrl as well?

You mean this is normal?

The problem is that in TreeCtrl after click on control GetCursor() returns actual item id while this is not the same in ArrayCtrl. Then its easy to SetCursor(). That's what I meant.

Actually, maybe it is about the "click" definition. If we are speaking about moving the focus to the Ctrl, I mean moving cursor to Ctrl with focus, yes, I would believe that and I think that could be

replicated in ArrayCtrl as well.

I solved the problem by adding to my ImageOption ReFocus() WhenAction.
But I want to believe that if something is clicked it should have SetFocus() on itself. Or is this too fuzzy?

I must admit that I have dared to change Win32 behaviour here a little - in Win32, when buttons or options are clicked by mouse, focus changes. IMHO, it is quite annoying, e.g. in Find dialog, you click to some option like "Whole word" and focus goes away from Find editfield...
