Hi,

I've found something during playing with UPP.

When I tried to compile "Bombs" example package (actually, to compile the "bombs.rc") I've got the following:

bombs.rc

'C:\Program' is not recognized as an internal or external command,
operable program or batch file.

C:\Program Files\CodeBlocks\MinGW\bin\windres.exe: preprocessing failed.

Bombs: 1 file(s) built in (0:00.34), 344 msec / file, duration = 594 msec, parallelization 0%

This is probably a typical missing apostrophe problem somewhere in the program or configuration.
